

358 Prison Mesh

358 mesh or most commonly termed prison mesh, is the ultimate mesh defence system for high risk or strategically important establishments. A 4mm wire is used on both vertical and horizontal wires to form a 76.2 x 12.7mm pattern. Unlike most other mesh systems, 358 mesh has a very small aperture to prevent foot and finger holds. The small apertures help to prevent items being passed through the mesh and reduces the opportunity for hand cutting tools to be effective. This formidable and incredibly strong system is most identified with prisons and military sites but can now be seen being utilised by local authorities and retail sites. 358 fencing is galvanised and powder coated in standard colours, with powder coating available in various RAL colour options. 358 mesh is secured with full length clamp bars but clips can also be specified for flexible installation. CLA design and manufacture both single and double leaf gates using the 358 infill to ensure the same level of security throughout.

Suitable For:

- MOD Sites
- High Security Areas
- Car Parks
- Industrial Sites

Key Features:

- Small Apertures
- Available from Stock
- High Security
- Flush panel design

Product Finishes:

6005
