Aston Bowtop Railings

Bowtop Railings are a traditional and ever popular design of railings. Bowtop railings are an effective and decorative way to form a protective and attractive boundary.

CLA Fabrications design and manufacture a comprehensive range of bowtop railings in one of our Midlands facilities to suit every requirement. We can supply the railings in self-colour, galvanised only, or galvanised and powder coated finishes. Our standard colours are RAL6005 green and RAL9005 black; a wide range of other colours are available on request.

We have designed a range of posts to suit various installation requirements, which includes standard dig in, base plated and cranked options. We also manufacture complementary matching gates to complete your boundary protection.

Aston Bowtop Fencing:

Suitable for

- Schools, Children's Play Areas
- Public Parks
- Gardens
- Housing Developments

Features

- Matching Gates
- Loose cleat design
- Available in various heights
- Solid Bar and Hollow tube infill
- Cranked post option
- Base plated post option

CLA ChildSafe®

Our ChildSafe range of bowtop railings have been designed with careful consideration to form a child safe and attractive boundary typically to play areas. The railings are designed to RoSPA guidelines so you can be confident that safety is our priority.

ChildSafe railings are designed to hinder children from trapping their heads, neck or limbs. This design of railings also allows parents or guardians a clear view through the bars.

To complete the boundary area we have designed matching gates using the same safety considerations as the railings. A hydraulic self closing mechanism option is available on single leaf gates to allow the gate to close automatically.

Woburn Vertical Bar Railings

Vertical bar railings are a traditional boundary fence, which are less imposing than industrial looking palisade type fencing systems. Vertical bar railings have their own versatility, by being suitable for both domestic and industrial applications, making the product popular with architects, designers and installers.

Woburn Vertical bar railing system is manufactured in our West Midlands facility using high quality materials and processes ensuring a robust and long lasting product.

To individualise our range of Woburn railings we also offer attractive alternative railheads such as fleur-de-lis and arrowhead.

Other designs of railheads are available on request.

As with all our ranges of railings CLA offer high quality matching gates to complete the boundary protection.

Woburn Vertical Bar Railings:

Suitable for

- Housing Developments
- Retail & Industrial Parks
- Commercial Areas
- General Perimeter Areas

Features

- Matching Gates
- Loose cleat design
- Available in various heights
- Solid Bar and Hollow tube infill
- Cranked post option
- Base plated post option

Warwick Flat Top Vertical Bar Railings

CLA have designed a range of flat top vertical bar railings to complement our other traditional railing Systems. Vertical bar railings are a simple and minimalist but pleasing to the eye alternative to some industrial looking vertical pale fence systems.

With its clean and understated lines, yet tough and long lasting. Our Warwick Flat Top railings offer a cost effective yet decorative solution to any boundary application.

Warwick Vertical bar railing system is manufactured in our West Midlands facility using the same high standard processes you expect and trust from CLA Fabrications.

Chartwell Balltop Railings

The modern world places increasing importance on both safety and aesthetics in the “design and build” environment. Balltop railings satisfy both of those considerations with their timelessly elegant and decorative design.

Chartwell Balltop Railings are easily identified by the spherical tops fitted to the vertical pales. They form an attractive boundary to provide “test of time” perimeter security to any location.

CLA Fabrications manufacture a comprehensive range of Chartwell Balltop Railings and complimentary gates at our West Midlands facility to suit every requirement.

Blenheim Estate Railings

Traditionally used in rural settings from the Victorian era to form boundaries on country estates, parks and farmland. This simple Victorian design offers a robust, yet restrained ornate and visually unobtrusive continuous boundary solution.

As an historical footnote, many metal railing systems were removed and recycled during the two world wars due to material shortages. Estate railings are having a renaissance and are being reintroduced across many parklands and estates and are also popular on new residential developments.

CLA Fabrications have introduced a modern reproduction of this traditional design.

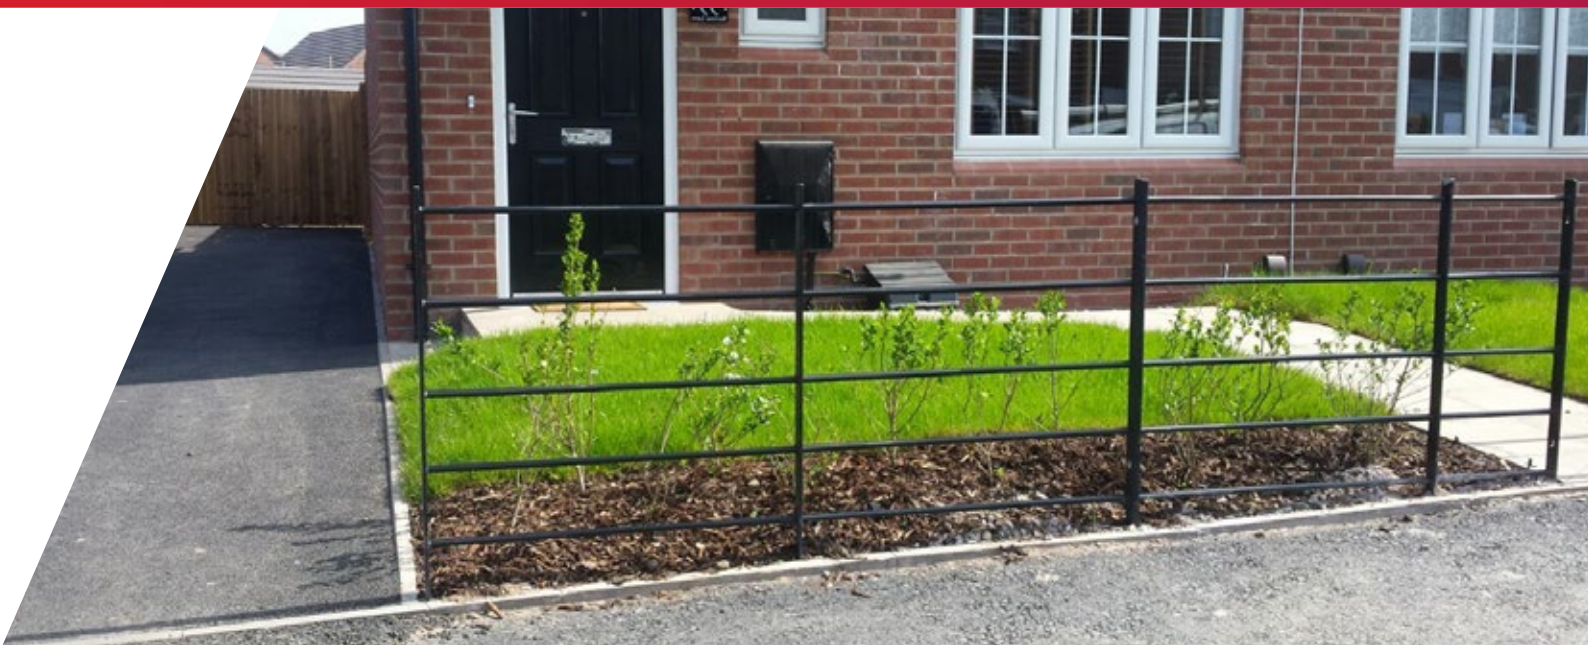

Our Blenheim Estate Railing system is supplied in 1.2m high ready-made 2.0m wide welded panels using stylish 19mm CHS rails giving the Blenheim a modern yet traditional look.

Blenheim Estate Railings system manufactured at our West Midlands facility and offers a quick and economical continuous boundary solution. As with all our other railing systems we manufacture quality matching gates.

Bespoke Fencing

CLA Fabrications have showcased expertise in manufacturing timeless and stylish traditional ranges of railings. With our vast experience we understand that architectural surroundings or the desire for a more individual boundary design may require more than a classic design railing system.

With an almost limitless range of finials, scrolls and infills available, CLA Fabrications can create your individual and sophisticated feature design. As with all our railing designs, CLA can also design bespoke gates to complement and enhance the desired feature of the boundary.

Our Bespoke railings and gates are handcrafted using our high standard systems and production methods in our West Midlands facility.

Acoustic Fence Posts

Major transport routes, construction sites and industrial areas are nowadays intertwined with urban areas. Noise pollution is an unwanted nuisance in our modern environment. Housing and office residents demand greater levels of privacy and protection from the effects of noise. Acoustic fencing systems are an effective noise and privacy management barrier.

CLA Fabrications use our expertise in steel fabrication to manufacture Acoustic Posts to meet fencing installers requirements. Contact CLA with your requirements for a free quotation.

Bespoke/Ornamental Gates

For those occasions when you cannot find what you are looking for within our featured comprehensive range of gates, or if you wish for a standout design or an grand statement.

At CLA fabrications we have the expertise to transform your design into reality, Our sales team are always happy to talk through your design requirements. Your design will be hand-crafted in our West Midlands Facility.

Bespoke/Ornamental Gates:

Suitable for

- Driveways
- Cemeteries & Gardens
- Heritage Sites
- Retail & Schools

Features

- Unique Hand Crafted Design
- Elegant & Security
- Highly Decorative
- Increase the value of a property

Stock Site Gates

For a cost-effective solution to secure building and construction sites etc, CLA Fabrications have developed a functional and low-cost site gate design. Our site gates are manufactured to a very high standard ensuring quality site protection at an affordable price.

The gates are manufactured from SHS frames and clad in our C-Pro55 mesh and comes complete with dig-in 120x120 SHS posts. The gates are supplied with adjustable eye bolt style hinges and secured with slide latch and drop bolts.

Stock Site Gates:

Suitable for

- Construction sites
- Airports & Utilities
- Warehousing
- Retail & Schools

Features

- Robust SHS Frame
- 120x120mm SHS Posts
- C-Pro55 Mesh Infill
- Slide Latch and Drop Bolts

Palisade Fencing

PALISADE

Palisade Gates

Palisade Fencing

In 2019 CLA Fabrications made a major investment and purchased a Palisade rolling mill for our West Midlands manufacturing facility. As a manufacturer, we ensure that only top quality materials are used in the production of our palisade products. CLA produce the modern “W” profile pale. The re-enforcing shape of the “W” profile produces a strong and resilient pale.

CLA Palisade Fencing is predominately used to secure large areas where a permanent cost effective but formidable long-lasting security deterrent is required.

CLA Palisade fencing is an easy to install system which comes in kit form and is suited to both hard and soft ground and has the ability to follow contours of the ground.

CLA Palisade Fencing has many benefits once installed to protect your property. The pointed pale top acts as a climbing deterrent and the style and shape of the pales gives little grip and deters climbing. With no compromise on quality materials and protective treatments our range of palisade fencing is low maintenance yet strong, sturdy and durable.

Suitable for

- Distribution Facilities
- Storage Facilities
- Retail Outlets
- Parks and Farmland
- Schools
- Commercial Areas

Palisade Gates

Access points within your perimeter can be controlled and secured by adding palisade gates. We manufacture a range of pedestrian and vehicular access gates from 1m wide up to an impressive 10m width.

We offer a range of manual locks to complete site security. And for those awkward to secure areas we also design and manufacture fantails. Our gates and palisade accessories are produced using robust and high quality materials found in our palisade fence system.

Hot Dip Galvanising & Powder Coating

All our steel palisade products are generally supplied hot dip galvanised to give a long lasting weather resilience. Powder coating is the perfect solution to enhance the cosmetic appearance of the palisade fence system and adds an extra protective layer. CLA offer RAL6005 Green & RAL9005 Black as our standard colours, other colours are available on request.

Features

- W Profile
- 2 mm & 2.5 mm gauge pale options
- Triple pointed, single pointed and round and notched head options
- 45x45mm and 50x50mm rail options
- 100x555 IPE posts- dig in and base plated options
- 1.8m to 3.0m standard height options
- Bespoke heights available on request
- Galvanised only and Galvanised and PPC options

C-Pro 55 V Mesh

Profiled mesh or 'V' mesh is a popular and economical single wire mesh system for general purpose low to medium risk boundary protection. An attractive and distinctive horizontal "V" shape is pressed into the panel to provide strength and rigidity.

This popular and attractive mesh is less imposing than other types of mesh due to its large aperture size allowing good visibility through the mesh, allowing the fence line to blend into its surroundings. Tried and trusted "V" mesh certainly has the goods looks, but does not compromise on value for money, strength, durability, and versatility.

C-Pro55 mesh panels are manufactured using a 5mm diameter wire with a 200mm x 50mm aperture. Our C-Pro55 mesh panel has a very useful barbed spike on the top edge of the panel to deter climbing. The panel can also be inverted with the barbed edge facing down. We supply sturdy 60mm x 60mm SHS posts with factory fitted inserts ready to accept clip style fixings

Suitable for

- New Build Housing
- Commercial Development
- Schools
- Hospitals

Gates

Our C-Pro 55 V mesh gates are manufactured in our West Midlands factory using quality materials and processes, Our attention to detail ensures our mesh gates are robust and are able to withstand continuous use. Gates are supplied complete with posts, slide latch and drop bolts as standard.

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

C-Tn66 656 Twin Wire Mesh

C-Tn66 mesh is a versatile entry level flat panel twin wire mesh system which is the next step up in security protection from single wire systems. 656 describes the diameter of wire used which simply refers to a 5mm diameter wire sandwiched between two 6mm diameter wires.

Double wire systems are inherently vandal resistant and offer greater cut-through protection than single wire systems. One edge of the panel is finished flush, and the vertical wires extend over the other edge to form a barbed top. This produces a simple and effective deterrent to scaling the fence. For a less aggressive look the barbed edge may be positioned at ground level.

Our C-Tn66 easy to install system is manufactured from galvanised and powder coated steel to give a resilient weatherproof finish. This superb system is offered in standard RAL colours whilst non-standard colours can be specified as a cost option. CLA's 656 mesh can be secured to the support posts using either our standard metal clip or for higher security areas we offer a full length clamp bar option. Both options are supplied with anti-tamper fixings which fit into our factory fitted inserted posts.

Suitable for

- Schools & Car Parks
- Retail Premises
- Business Parks
- Industrial Sites

Features

- Galvanised & PPC
- Mesh size 200x50mm
- 60x60mm SHS Posts with cap
- 1x 5mm Vertical & 2x 6mm Horizontal Diameter Wires
- Easy Fit Metal Clip System
- Full Length Clamp Bar Fixing Option
- Choice of RAL Colours

Gates

Our matching C-Tn66 gates are manufactured in house using modern equipment and quality control methods. These security gates provide an access point within the fence line. The gates are infilled with our high quality 656 mesh to match the fence line. Our gates come complete with posts, hinges, slide latch and drop bolts as standard.

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

C-Tn88 868 Twin Wire Mesh

868 mesh has a similar appearance to its 656 twin wire counterpart but is a heavier duty mesh system and is generally used for medium to high risk areas. The mesh pattern makes this system tough, rigid, attack resilience and extremely versatile. The mesh aperture is 200 x 50mm which provides excellent visibility through the mesh.

The barbed edge of the panel can either be installed at the top of the fence for additional security or towards the ground to give the fence line a less aggressive appearance. As with all our mesh systems the mesh is galvanised and powder coated to provide long lasting durability.

This exceptionally strong and low maintenance panel system offers a myriad choice of applications. C-Tn88 can be used in multi-lift panels where a greater height of fence is required, for example, in ball-stop or sports fences. CLA stock a range of standard height panels and posts for this easy to install system. As standard we supply metal clips and M8 anti-tamper fixings for fixing panels to posts and for extra security we have a full length clamp bar option supplied with M8 anti-tamper fixings. Our posts are either 60x60 or 80x40 depending on panel height requirements and come with factory fitted inserts.

Suitable for

- Schools & Car Parks
- Retail Premises
- Business Parks
- Industrial Sites
- Recreational Grounds

Features

- Galvanised & PPC
- Mesh size 200x50mm
- 60x60mm or 80x40mm Post option with plastic caps

Gates

We use our own dedicated team of fabricators in our modern production facility to produce high quality matching 868 mesh infilled gates. Our gates and posts are manufactured from box section to give you a robust gate. Gates are supplied complete with, posts, hinges, slide latch and drop bolts as standard.

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

C-358 Mesh

C-358 mesh or most commonly termed prison mesh, is the ultimate mesh defence system for high risk or strategically important establishments. A 4mm diameter wire is used on both the vertical and horizontal wires to form a 76.2mm x 12.7mm pattern. Unlike most other mesh systems, C-358 mesh has a very small aperture to prevent foot and finger holds.

The small aperture helps to prevent items being passed through the mesh and reduces the opportunity for hand cutting tools to be effective. This formidable and incredibly strong system is most identified with prisons and military sites but can now be seen being utilised by local authorities, retail sites or indeed anywhere that needs a high degree of physical perimeter protection.

C-358 fencing is galvanised and powder coated in standard colours, with powder coating available in various RAL colours as a cost option. Our range of C-358 fencing is available in a variety of heights, complete with dig in or bolts down posts options. Typically C-358 mesh is secured with full length clamp bars but clips can be specified to ensure flexible installation options for fencing contractors. To complete and maintain the perimeter protection either for pedestrian or vehicle access, CLA design and manufacture both single and double leaf gates using the same “358” mesh to ensure the same level security. Gates are supplied complete with posts, slide latch and drop bolts as standard. A range of manual lock options are available

Suitable for

- MOD Sites
- Car Parks
- Retail Premises
- Business Parks
- Industrial Sites
- High Security Areas

Features

- Galvanised & PPC
- 4mm diameter wire
- 76.2mm x 12.7mm pattern
- 60x60mm or 80x40 Posts options with plastic cap

Gates

Constructed in our UK premises CLA offer matching gates to complete your high security perimeter. Our gates are manufactured using high quality materials and infilled with the same climb resistant and tough 358 mesh panel used in our 358 mesh fencing system. We can manufacture the gates to your bespoke sizes to fit your requirements.

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

Safetop Mesh

Rolled top mesh looks very different from other types of mesh and is often quoted as “user friendly” mesh. It has distinctive rolled top and bottom edges to the panels making this system an ideal choice where user safety needs to be considered.

The open mesh design provides good visibility and with no sharp or protruding edges makes this system ideal for areas where children are playing or the public may come into contact with the fence. This attractive, safe and sturdy mesh system is an obvious choice for nurseries, primary schools and playgrounds but can be used anywhere that requires enhanced safety.

Our “Safetop” 3.0m wide panels are available in 1.2m, 1.5m and 1.8m heights, heights over 1.8m high can be achieved by “multilift” which is a combination of panel heights. All our “Safetop” mesh comes galvanised and powder coated in our standard colours, however, as with all our mesh systems other colours can be specified for an extra charge. This system comes complete a kit using 60mm x 60mm SHS posts and M8 anti tamper fixings.

Suitable for

- Educational Facilities
- Car Parks
- Retail Premises
- Nurseries & Play Grounds
- Public Buildings

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

Ballcourt Mesh

Over the last decade or so mesh systems have become a popular choice to form a boundary around ball courts, play areas, sports courts, urban sports areas and multi-use sports areas (MUGA).

Our purpose-designed “Ballcourt” mesh system is based on our tried and trusted aesthetically pleasing “868” mesh system but with additional wires added at the lower section of the mesh to form a “rebound” panel , which provides strength and impact resistance.

Our Ballcourt mesh system is manufactured using a vertical 6mm diameter wire sandwiched between twin horizontal 8mm diameter wires. The lower 1.2 metre section of the panel is reinforced with additional wires to create the rebound area. For added strength and vandal resistance the mesh panels are secured to the posts using a full-length clamp bar; we can also supply as an option “EPDM” washers to help prevent panel movement and vibrations, thus reducing impact noise.

Suitable for

- MUGA
- Football Pitches
- Tennis Courts
- Urban Sports Areas
- General Sports Areas

Features

- Designed for high usage
- Excellent & Rigid rebound system
- Full Length Clamp bar
- Good visibility for spectators
- EPDM Washer Option

Gates

To contain the sports activity and secure the area from unauthorised use, CLA manufacture high specification single or double leaf swing gates. Our gates are supplied complete with posts and a range of manual lock options.

- Configured as single or double leaf for pedestrian and vehicular access options
- A range of manual lock options

Centurion Swing Gate Parking Barrier

Our Centurion manual swing barrier gate helps prevent access to unauthorised areas or to secure parking areas, designed to offer a secure low cost and reliable method of access control. This type of gate consists of a sturdy arm which can be locked either in the open or closed position.

Main Features

- Single or double leaf options
- Suitable for private or commercial premises
- Constructed from high quality steel hollow box section
- Durable design

Knee Rail

Knee rail or Trip rail is so called due to its height which is generally between 450mm & 750mm. This type of rail is particularly popular for protecting grassed or planted areas or to show an areas boundary. These rails also offer a low cost and effective deterrent preventing vehicles parking on verges or straying onto unauthorised parking areas.

CLA Fabrications manufacture our trip rails using quality steel and fabrication processes making them less prone to vandalism than timber alternatives. Our railings are hot-dipped galvanised for rust protection, and to aesthetically complete the railings we offer a polyester powder coating finish.

Security Locks

Whether you need to secure a commercial or a residential property, at CLA Fabrications we understand that a quality lock is essential for added security and peace of mind. CLA offer a comprehensive range of high-quality locks to ensure our in-house designed and manufactured gates suit your security requirements.

Lock Shroud

Helps to prevent intruders reaching round to operate locks from the outside.

Latch Deadlock

Can be slammed shut and deadlocked for extra security.

Double sided non-power operated digital keypad

Designed for keyless entry/exit, punch in the correct code and turn the handle and the bolts moves to open the gate.

Quick Exit Gate Lock

Designed to allow rapid opening and exit through gates. Two options are available with either a non-powered operated keypad access or keyed access on the outside.

Handrails

Metal handrails are both a design and safety feature for domestic, commercial, or public properties. Handrails are not only used as a decorative feature, but are an important safety and protection feature for new builds and retro fits to existing properties. They are a welcome aid, and can provide peace of mind to those who might require some assistance using steps, staircases, or walkways.

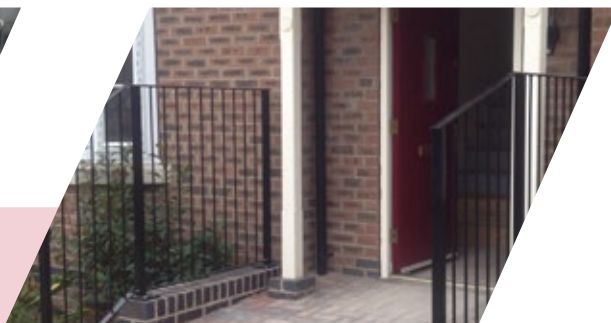

CLA Fabrications can fabricate metal handrails to suit your exact requirements using quality materials and fabrication procedures here within one of our West Midlands production facilities.

Suitable for

- Houses
- Multi-Story Buildings
- Carparks
- Offices
- Gardens
- Walkways

Features
